

Adding a Google Font to your Website

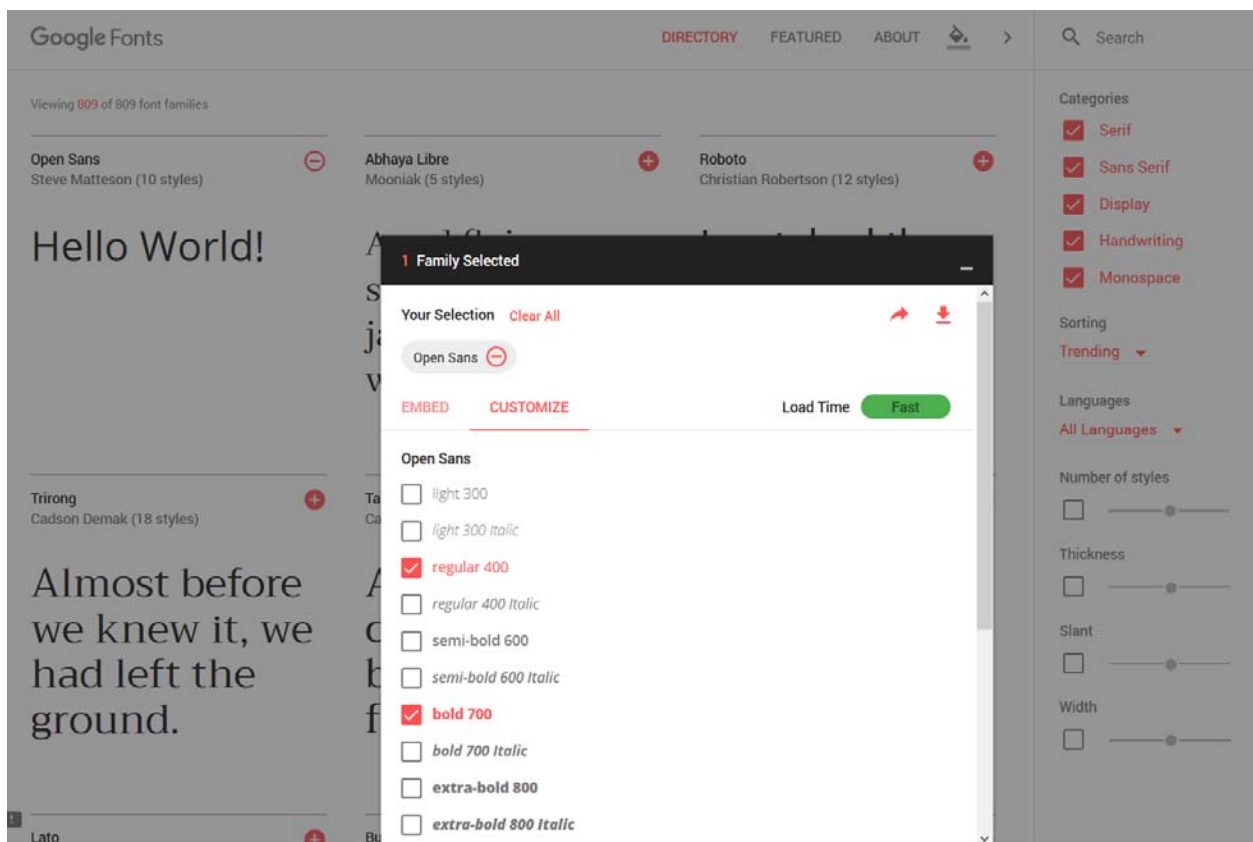

Find your Font:

- Go to <http://www.fonts.google.com>
- Browse for a font you would like to use in your project. You can filter by font category (Serif, Sans-Serif, Display, Handwriting or Monospace), Languages, or Style.
- To preview how a font would like using your text, place your cursor into the sample text provided and begin typing.
- To apply this text to all fonts on the page, click “apply to all specimens” at the bottom of the font preview.
- Select the font you would like to use by click the plus button next to the font name.

Adding selected fonts to your website:

- Click on the bottom of the screen on the bar that says “# Family Selected”. It will open an overlay window that shows you the fonts you have selected and allows for you to choose additional options.
- Under the **Customize Tab** you can choose different font weights and styles to include. Pay attention to your load times to make sure they are not ‘Slow’.

- On the **Embed Tab**
- Click Import and select the text starting with @import as shown in the screenshot above.
- Copy and paste the @import link in the top of your style sheet
- In the Specify in CSS Section, Note the name of the font so you can include it in your CSS.
